

ACID+

.....
 Acid regeneration agent for pH-STAB 2.0

→ TECHNICAL DESCRIPTION

Acid regeneration agent for cationic resins **Acid+** is used for the regeneration of pH-STAB 2.0; its action is based on the exchange of ions H⁺ caused by the active sulfonic groups of the resin. It should be used after each exchange cycle with pH-STAB 2.0 to regenerate the resin and to bring it again in condition of exchanging ions H⁺ with the wine.

The special mixture of strong acids gives the sulphuric acid a better regeneration action, thanks to the improvement of the cations exchange among the spheres and the solution.

Technical Characteristics

- Physical appearance: viscous liquid
- pH (1% solution): 1,5 ± 0,5
- Relative density at 20°C: 1,3 ± 0,05

The here indicated chemical-physical characteristics represent the typical product data drawn from the analysis carried out on it. These data are not a specification.

After 5 acid regenerations, we suggest an alkaline washing with Alca-.

→ COMPOSITION AND TECHNICAL CHARACTERISTICS

Sulfuric acid.

→ DOSAGE

17% of the amount of resin.

→ INSTRUCTIONS FOR USE

In aqueous solution in recirculation.

→ STORAGE AND PACKAGING

Store in a cool dry place, away from direct sunlight and heat.

- 25 kg net cans.
- 220 kg net drums.
- 1200 kg net BIG.
