# **FERMOALE German K**

## Active Dry Yeast for top-fermenting beer brewing

## **BEER STYLES**

Traditional Kölsch and Altbier styles; and also a range of ales where a neutral and clean malt character is important, such as Cream ales and Califo rnia Common (a hybrid Ale-Lager style).

## **AROMA & FLAVOUR CHARACTERISTICS**

Gives a neutral profile that allows the expression of malt characters to give a dry clean finish. There is a very low level of diacetyl and subtle ester notes of pear, apple and citrus

### TECHNICAL DATASHEET

Valid from: 22/03/2023

## **PITCHING RATE / DOSAGE**

Pitch directly into the wort in the fermenter, at pitch rate of:

50 - 80g/hl of cool wort at 13-21°C / 55-70°F

The pitch rate is dependent on the brewing process conditions and will affect the fermentation performance and the final taste profile of the beer.

High gravity, high adjunct or high acidity fermentations may require higher pitching rates and the addition of yeast nutrients.

## **APPLICATION**

It is generally recommended that active dry yeast is pitched directly into the wort without prior rehydration.

If direct pitching is not feasible the yeast can be hydrated and pitched in liquid form.

To rehydrate dissolve the dry yeast in sterile water or in wort at 13-21°C / 55-70°F at a ratio of 1:10. Stir gently and leave for approximately 20 minutes. Gently stir again and add to the cooled wort in the fermenter.

To avoid yeast stress, ensure temperature fluctuations are minimal.

## STORAGE

Store in vacuum sealed packaging where possible, in dry odourless conditions, at 4°C / 40°F.

Limit exposure to air.

Do not freeze.

On opening the package, the yeast should be used immediately.

Shelf life is 36 months from production date.

Do not use after the expiry date shown on the pack.

## **FOOD SAFETY**

This product is GMO free.

This product is allergen-free.
